

Directions for use

Your pet's claw has blood vessels known as the 'quick'. It is important that you do not cut into this area. It is easy to locate the quick on animals with light coloured claws. For those with dark coloured claws it may be easier to locate the quick by looking on the underside of the nail - however if in doubt seek the advice of your vet or pet groomer.

Hold your pet's foot carefully and ensure that you are in complete control before starting to trim the nail. Begin cutting in one smooth action. If you are unsure, only cut off a small amount at a time.

Keeping your pet's nails trimmed is essential for good care and grooming. If your pet is particularly nervous or dislikes having their claws clipped, try using a [Mikki Nail File](#).

Important: keep out of reach of children. Use extra care when using any grooming aid with sharp edges.
